HIGH PRESSURE laminates

Harmonious Fusion of Timeless Beauty And Artistic Expertise.

Enhance Your Residential and Commercial Spaces with Formite® High Pressure Laminates

Formite® High Pressure Laminate (HPL) commonly known as Formica, is the perfect solution to bring durable style and on-trend design to residential and commercial spaces. Our high pressure decorative laminates are manufactured using layers kraft paper impregnated with phenolic resin, protected by a durable overlay coating. With a fusion process under high temperature and pressure, the melamine and phenolic resins are activated, resulting in a tough, waterproof and flawless finish that stands the test of time. Formite® High Pressure Laminates (HPL) is available in numerous designs and colors with different surface finish textures.

Formite® presents a versatile selection of High Pressure Laminate (HPL), thoughtfully crafted and available in three different thickness options:

HPL ECONO: HPL-ECONO is a 0.45 mm thick HPL variant featuring two core papers and one décor paper. While maintaining a slim profile, it offers exceptional resistance to wear, impact, and scratching. This variant is ideal for lighter-duty applications that require a thinner laminate profile without compromising durability.

HPL CLASSIC: HPL-CLASSIC, with its 0.6 mm thickness, consists of three core papers and one décor paper. The additional core paper provides enhanced stability and strength, making it suitable for applications that may face greater stress or wear. Choose from a variety of designs and colors to match your design preferences.

HPL TUFF: For applications demanding increased durability and strength, our HPL-TUFF variant is the ideal choice. With a thickness of 0.8 mm and four core sheets along with one décor paper, it offers superior resilience against impact, heat, and moisture. This type is particularly well-suited for high-traffic areas or surfaces subject to rigorous usage.

Transform your spaces with Formite's High Pressure Laminates. Our extensive range of designs and patterns includes Solids, Woodgrains, Marbles, and Patterns, allowing you to create the perfect aesthetic for your project.
