

Formite's high pressure laminates, compact laminates or laminated boards are subjected to a meticulous process using embossed plates, which are exclusively sourced from renowned European manufacturers. During this process, the embossed plates are precisely positioned and applied to the sheets or boards.

Once in place, the immense pressure is exerted upon the material through plates, accompanied by extreme temperatures. This combination of pressure and temperature creates a transformative effect, imparting the surface with exquisite textures that are both visually captivating and tactilely pleasing.
